## Research and Development Engineer-Med Device

### Description

**Title:** Research and Development Engineer

**Reports to:** Engineering Director

**Location:** Orange County, CA

**Salary Range:** 110-140K

To be considered, email Resume To:

**Jackie@BioLink360.com**

Our client is a company that is focused in the medical device industry, and they are hiring a Project Engineer with 4-8 years of experience. The person hired will be a salaried employee who will work full cycle product development, from R&D to post-market surveillance activities, and be working on a wide range of projects simultaneously.

The person hired into this role will have a solid background in product design, including 2D/3D CAD design and Geometric Dimensioning and Tolerancing (GD&T) experience. This person will be responsible for overseeing the manufacturing of design prototypes and production parts, working directly with clients and internal team members to meet deliverables.

This position is a full time, salaried role with full corporate benefits.

This is a small team of tenured Engineers and Regulatory Affairs SMEs who work closely together. This is an environment that fosters professional development, engineering excellence and a creative approach to the industry's toughest product design and quality challenges.

### Responsibilities

- Develop designs for manufacturability, test plans, protocols, and reports as part of design verification and validation.
- Evaluate different design solutions and components to determine optimum solution for the application.
- Plan, execute, and document feasibility and verification testing in support of product development.
- Support the design transfer of product from R&D to Manufacturing for volume production
- Collaborate as part of cross-functional project teams including product development, quality, regulatory, and manufacturing.
- Support post market sustaining efforts (i.e. complaint investigations, product training)

### Qualifications

### Hiring organization

BioLink 360
